About Our Files and this PDF

Import Size
Our files are created in Adobe Illustrator at 72 DPI. Depending on your software/machine, you may have to adjust your import settings for your file to import at the intended size.

Standard Sizing
Not all personal die cutters are created equal. Though our standard file size is 4" at 72 DPI, we do not guarantee that every machine will capable of cutting it. In rare cases, it may be necessary to size the file larger.

Grey Boxes
Because some of our images employ the color white, it may be difficult to view them printed and in certain applications. To help enable better viewing, images are illustrated on top of a striped, grey box. This box is for illustrative purposes only and is not included in the actual file.

DXF
Our DXF files are scaled in the millimeter (1 mm : 1 unit). When importing, be sure to adjust your settings appropriately. If nothing appears when opened, please be sure to check outside the canvas bounds as some programs misinterpret the origin.
